

### ABSTRACT OF THE DISCLOSURE

A speaker-dependent voice recognition method is provided involving the use of a voice recognition system, during which voice utterances of the user are trained, and commands are assigned to the trained voice utterances. The present disclosure seeks to carry out a training of new commands in a time-saving manner. To this end, in the event of a non-recognition of a voice utterance, the voice recognition system provides the user with the opportunity to immediately assign the voice utterance to a new command.
